

Vaccines & Autism:

What every parent should know

Rates of autism have increased in line with the vaccine schedule.
In the 1980s, autism was so rare it wasn't even tracked.

1983	 24 childhood vaccines	 1/2000 autism rate
2018	 72 childhood vaccines	 1/36* autism rate

If autism rates continue unabated, by 2035 experts predict that:
1 in 2 children will be autistic

In 1986, pharmaceutical companies received complete federal protection from vaccine injury and death lawsuits. This spawned a huge increase in the childhood vaccine schedule. **Coincidence?!!**

Known **neurotoxins in vaccines** — including aluminum and mercury among others — are linked to the same **developmental and neurological delays** as seen with Autism in published scientific studies. These issues were seen even in tiny doses.

Think the increase is because more doctors are recognizing it? Not according to a 2006 study from John Hopkins, which stated: **only 8% of pediatricians routinely screened for autism.**

Vaccines are **highly profitable**. Pharma is pushing mandatory vaccination laws — please get involved!

*statistics taken form the CDC
